of software development*

Languages Spanish (Native)
English (Intermediate)
Portugueses (Intermediate)

Career

1995 Starting my curiosity for the web in 1995 (22 years old) I oriented my computer knowledge towards this world.

- I started by providing solutions to well-known people, which instantly became a job demand.
- I worked internally for several recognized IT agencies in my city increasing my experience and knowledge.

2001 In 2001, I developed a web project in Bahia, Brazil for 3 years, a turning point that helped me to generate my own concept of the medium.

- Since then I have been working from my hometown, in particular taking projects in their entirety and in a freelance way for national and international brands and agencies, providing specific solutions.

2015 In 2015 I took on an important challenge in my career, to join an IT company to validate my knowledge and skills.

- In February of that year I joined Globant as Front End Developer, I gained experience in group work, new tools and work methods.
- Currently I'm still in the company as SENIOR UI Developer, to date I have participated in several projects for different accounts.

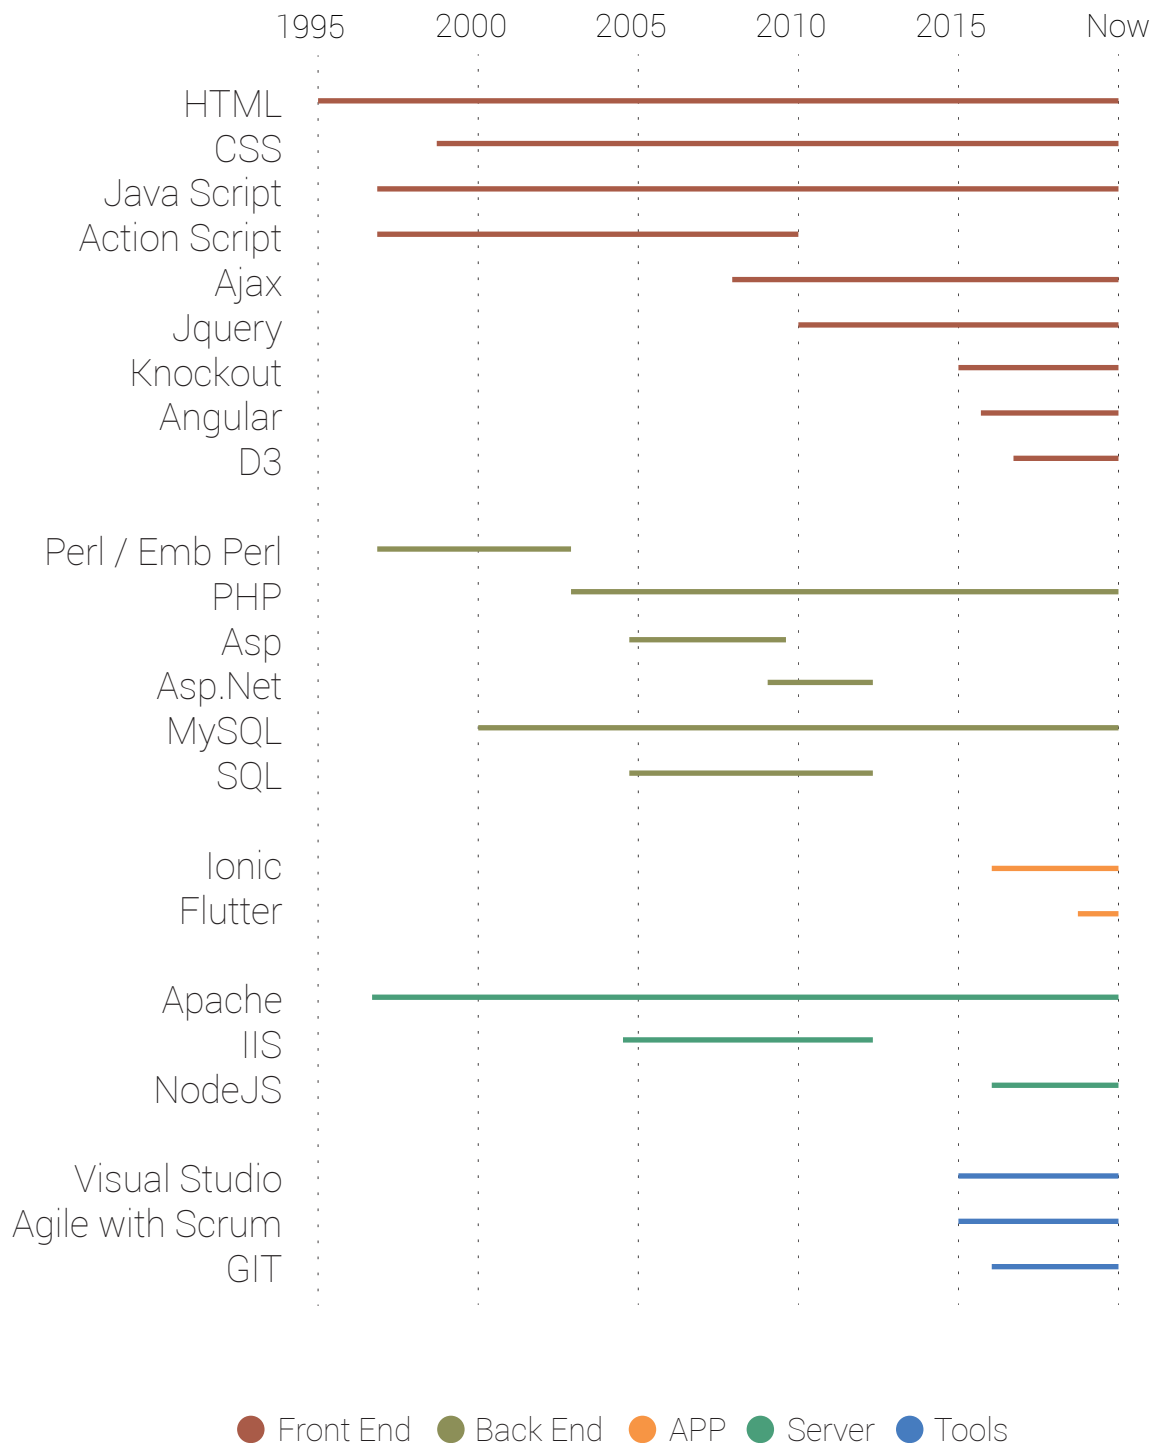

2018 In mid-2018 I signed a contract with the Port of Buenos Aires (AGP) to join the Engineering and Communication teams.

- I trained with Modernization of the State for the maintenance of the website of the Port within argentina.gob.ar.
- We develop the port APP for Android and IOs.
- We have improved the way of displaying information from data collected by the Port's meteorological station.

2022 In 2022 I signed a contract with the Buenos Aires Transportation Safety Board (JST) to join the Engineering team.

- We developed an APP for research agents to follow the protocol.
- Currently I'm still working at JST on different projects.
